BASIC-ABSTRACT:

Modified polyolefin resin is prepd. by graft copolymerising granular polyolefin, unsatd. carboxylic acid or its deriv. and unsatd. silane cpd. at a temp. lower than the m.pt. of the polyolefin in the presence of a radical initiator.

The polyolefin is, e.g., high pressure process polyethylene, low pressure process polyethylene, polypropylene, poly-1-butene homopolymer or

copolymer
with other alpha-olefin. It is pulverised into a particle size of
0.001-4mm.
The unsatd. carboxylic acid or its deriv. is e.g., (meth)acrylic,
mono- or
di-ethyl maleate, maleinamide, maleinimide, N-phenyl maleimide or
maleic
anhydride. It is used in an amt. of 0.1-50wt.% of the polyolefin.

USE/ADVANTAGE - The resin has high adhesion with steel, Al, glass,
polyvinyl
alcohol, nylon and saponified ethylene/vinyl acetate copolymer. The
graft
copolymerisation prevents the decompns. of polyolefin to overcome
the poor
moulding workability and the degradation in impact resistance.
